Important Note

Dear PACT Suite user,

As a result of ongoing research and development at QIAGEN, 10 mM ZnCl₂ contained in solution number 48 (cat. no. 135748) has now been removed. This is to ensure reproducibility in the crystallization process.

It has been established that $ZnCl_2$ is not very stable at higher pH and tends to form insoluble aggregates of $Zn(OH)_2$, thereby compromising the reproducibility of the crystallization process. Therefore, it is excluded from solution number 48. The composition table provided with the kit has also been updated to reflect this change.

If you have any questions, please call one of the QIAGEN Technical Service Departments or distributors (see back cover of handbooks or visit <u>www.qiagen.com</u>).

Best regards,

QIAGEN
