Important Note

New packaging concept for Investigator® Quantiplex® Pro FLX Kit

Dear valued customer,

At QIAGEN, we are committed to making your workflows more efficient and reliable while reducing environmental impact. We are therefore pleased to introduce an updated packaging and shipping concept for the Investigator Quantiplex Pro FLX Kit. The kit will now be supplied in a single box instead of two and shipped at ambient temperature rather than at 2–8 °C.

These changes do not affect kit performance or require revalidation.

If you have further questions, please contact your local QIAGEN representative or visit www.qiagen.com/support for Technical Support.

Sincerely,
QIAGEN
